

Water Conservation Tips

Studies show that dripping faucets and leaking account for as much as 14% of all indoor water use, equivalent to 10 gallons per person of water lost per day. Now is a good time to check for inside leaks. To use your water meter to check for leaks, start by turning off all faucets and water-using appliances and make sure no one else uses water during your testing period.

Next, take a reading on your water meter, wait for about 30 minutes, and then take a second reading. If the dial has moved, you most likely have a leak somewhere inside your home or business.
